#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

**Claims 1-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over**

**Saito in view of Wanderer et al., Osborne et al., Spencer.**

The Saito patent discloses a wing unit, a barrel unit, and a needle unit. Saito does not disclose the use of a cap. However, the use of caps in needle sheath designs is conventional in the art as evidenced by the teachings of Wanderer et al. and Osborne et al. Both patents demonstrate that the use of caps is conventional in the needle sheath arts. Additionally, Wanderer et al., Osborne et al., and Spencer demonstrate that the use of barrel units with slots is conventional in the art of needle covers. Accordingly, for a person of ordinary skill in the art, modifying the Saito needle sheath assembly with a cap and slot designs in the barrel unit to secure the needle, would have been considered obvious in view of the proven conventionality of these enhancements and the inherent safety benefits of these enhancements to the needle sheath arts.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Please review the teachings of U.S. Patent Numbers 5,104,384, 4,813,940, 5,242,401, and 6,958,054.
